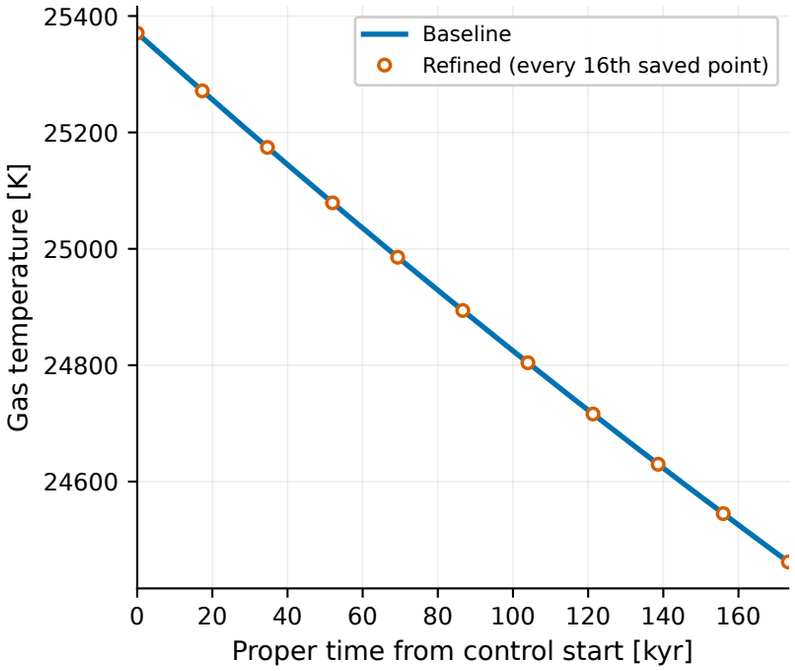
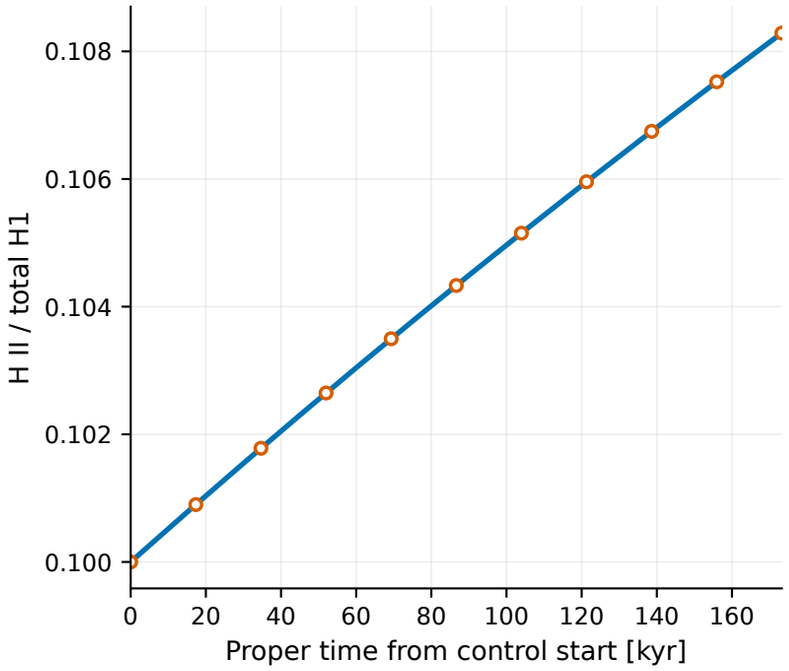
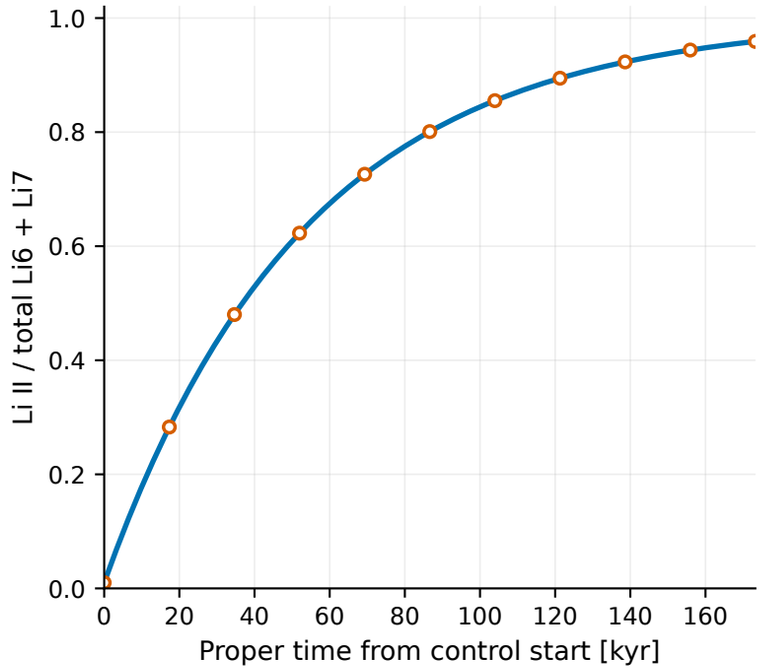
C01: isolated neutral CI + D/H charge exchange

Fixed-density closed gas: nH = 0.001 cm⁻³; baseline and refinement share the same initial state.







Maximum saved scaled-state difference = 4.574e-15. The small trace-CX step cap limits both solves; this is not a bound on model error.
Time is dimensional proper time. Li II is summed over Li6 and Li7. These isolated histories do not replace a PHYS78 cosmological trajectory.
