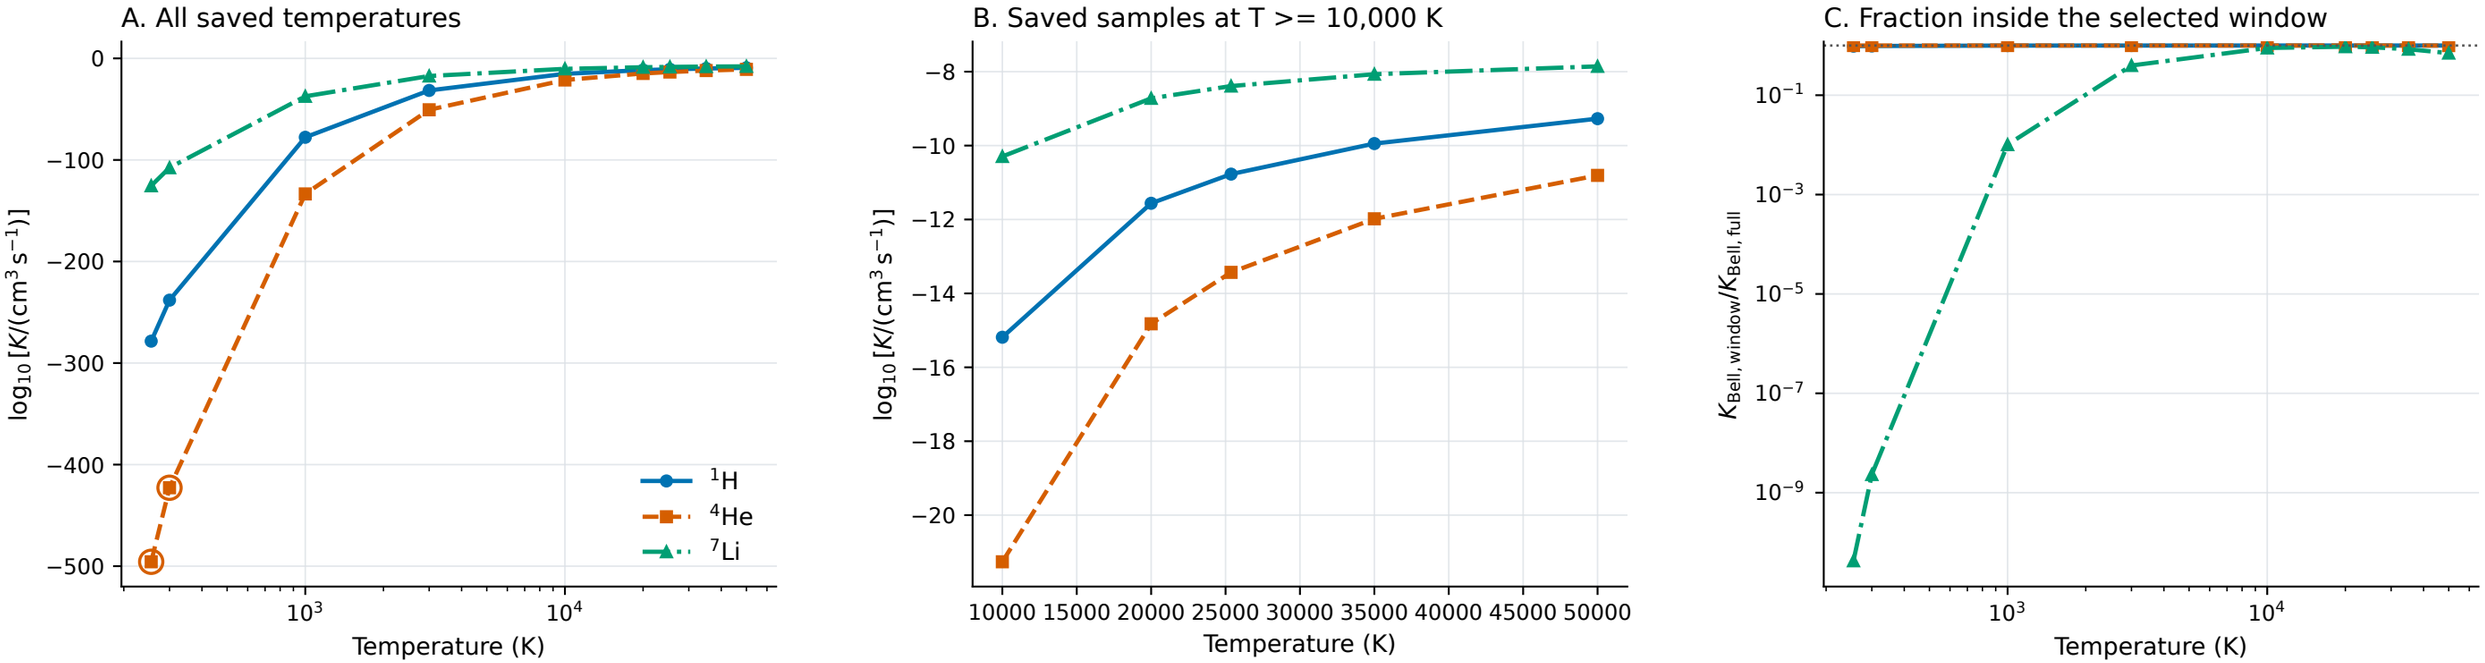
Finite-source ionization rates and Bell-model window fractions

Stationary-target Maxwell operator | markers are saved samples; segments guide the eye



Finite incident-energy support (eV): H: 13.6058-968.61; He: 24.6-60; Li: 6-15. Open rings flag raw-rate underflow; saved log10 K is retained.

Bell fractions belong to the Bell analytic fit; they are not physical coverage fractions or error bounds.

Source limits: unpublished He author curve; omitted threshold intervals and upper tails; no isotope-resolved cross-section certificate.
