Generic Maxwellian kernel | explicit coefficients; no H/He/Li physical admission
Pure-log synthetic cross section
$\log_{10}[K/(\mathrm{cm}^3\,\mathrm{s}^{-1})]$
$U = I/(k_B T)$
Finite log rate
Float rate underflow
Incoming excess energy
$\langle E - I\rangle/(k_B T)$
U
Rate comparison with E_1 oracle
Relative difference
U
Order 32
Order 64
Saved 9-witness verification only. Quadrature agreement and node positivity are not a global error bound or a source validation.
